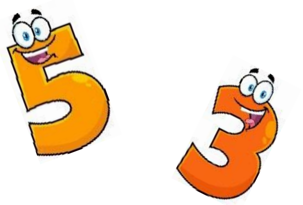
5 MARK QUESTIONS

QUESTION 1

A father's age is currently three times that of his daughter. In twelve years, he will be twice as old as his daughter will be at that time. What is the current age of the father?

QUESTION 2



How many numbers from 1 to 1000 are divisible by 3 or 5?

(A) 467 (B) 500 (C) 533 (D) 600

QUESTION 3

At a party there were 110 people who were either female or male. Each person could dress in either blue or green.

In addition, the following information has been given:

- 35 males are dressed in green.
- 50 are females.
- 45 are dressed in blue.

How many females are dressed in green?

QUESTION 4

What is the highest number below 100 000, which when written in words, doesn't have the letter ***n*** in it?

QUESTION 5

If it took 135 minutes for 5 t-shirts to dry on a washing line, how long would it have taken for 17 t-shirts to dry?

QUESTION 6

Evaluate:

$$2024^{1^{2^{3^{4^{5}}}}}$$

QUESTION 7

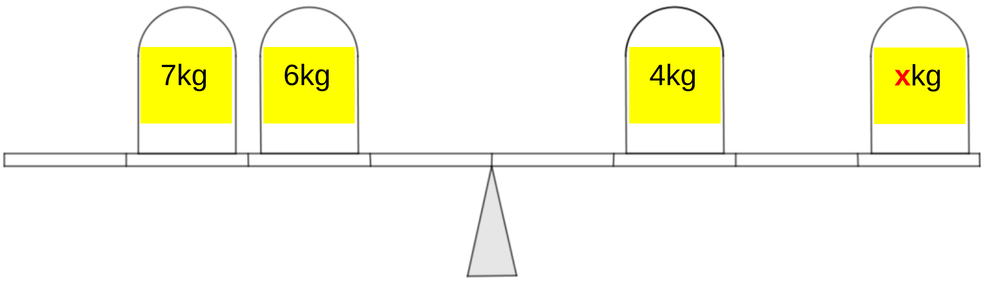
A “lucky” number between 1 and 50 meets the following criteria:

- It is divisible by 3 when the digits are added together.
- the total is between 4 and 8.
- It is an odd Number.
- When the digits are multiplied together the total is between 4 and 8.

What is the lucky number?

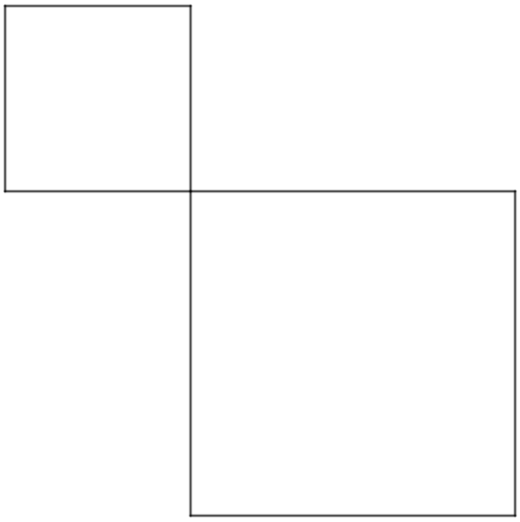
(A) 12 (B) 18 (C) 27 (D) 15

QUESTION 8



What mass should be placed on **x** to balance the scale?

QUESTION 9



An area of land, consisting of the sums of the two squares, is 1000 square metres. The side of one square is 10 metres less than two-thirds of the side of the other square. What are the sides of the two squares?

QUESTION 10

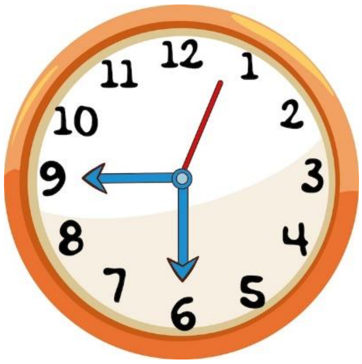
A maths teacher writes the following on the whiteboard:

What will the units digit be of this number?

10 MARK QUESTIONS

QUESTION 11

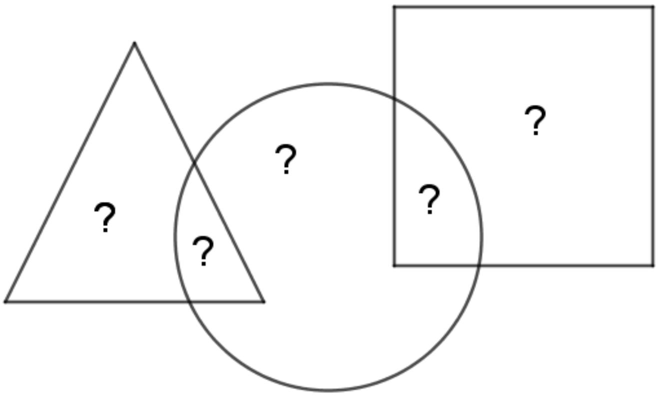
What is the first time after 5 o'clock when the angle between the minute hand and the hour hand is 62°?



QUESTION 12

Julian and Joseph are twins with different jobs. Julian earns five-eighths of what Joseph earns, but Julian's expenses are half of Josephs's. Julian ends up saving 40% of his income. What percentage of his income does Joseph save?

QUESTION 13



The question marks represent five consecutive numbers.

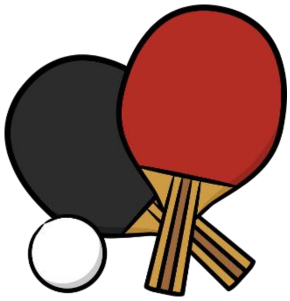
When added together:

- The numbers in the triangle = 35
- The numbers in the square = 29

What numbers replace the question marks? *(Order your answer from left to right)*

QUESTION 14

Five players compete in a table tennis tournament such that each player plays every other player exactly once. There are no drawers in these matches. In each game both players have the same probability of winning, and the result of one game does not influence the outcome of the others.



What is the probability that some player will win all her games?

QUESTION 15

The new 5-rand coin will display the *Southern Right Whale.* If the new R5 coin rolls along the interior of a square along its sides without slipping.

By the time the coin has returned to its starting position, it has made one whole revolution.

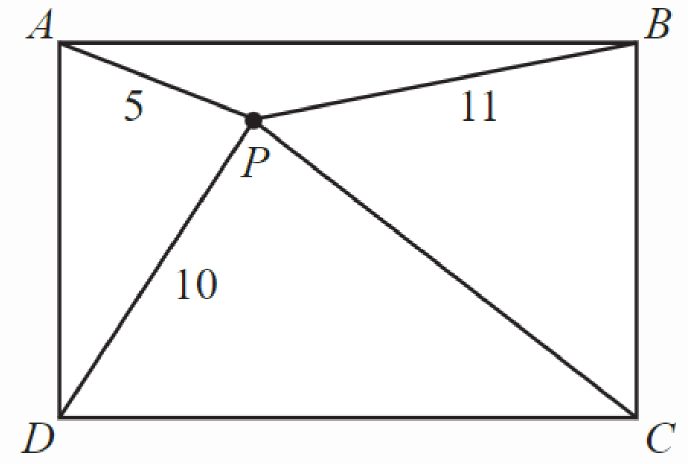
What is the side length of the square?

Assume the radius of the coin is 1cm.

20 MARK QUESTIONS

QUESTION 16

Adam, Bonolo, Casey and Delilah are standing on the four corners of a rectangular field, with Adam and Casey at opposite corners. Prish is standing inside the field 5m from Adam; 11m from Bonolo; and 10m from Delilah. In the diagram below, the locations of Adam, Bonolo, Casey, Delilah and Prish are marked with A,B,C,D, and P respectively.



Determine the distance from Prish to Casey.

QUESTION 17

Two trains of equal length are on parallel tracks. One train travels at 40 km/h and the other train travels at 20 km/h.

One day, the two trains are travelling in the same dire ction, and the front end of the faster train is at the same place as the back end of the slower train.

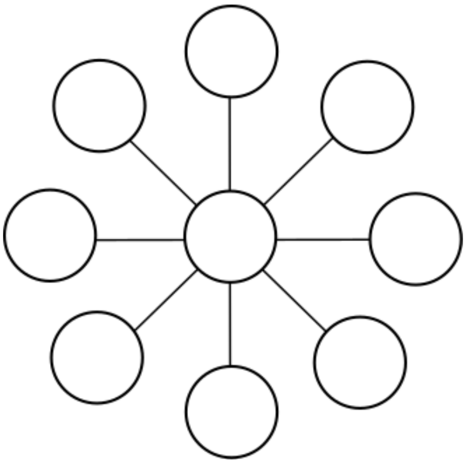
The faster train then completely passes the slower train so that the back end of the faster train is now at the same place as the front end of the slower train.

Another day, the two trains are travelling in opposite directions, and the front end of the faster train is at the same place as the front end of the slower train. The trains then completely pass each other so that the back end of the faster train is at the same place as the back end of the slower train.

If it takes 2 minutes longer for the trains to completely pass one another when travelling in the same direction than it does when they are travelling in opposite directions, determine the length of each train.

QUESTION 18

Consider the puzzle below in which you are required to place each of the numbers 2, 3, 4, 5, 6, 7, 8, 9, and 10 in a different circle in the diagram so that each line of three circled numbers has the same sum.



Find three numbers that can go in the middle to achieve this.

QUESTION 19

Sid and Jim are engaged by the local council to paint yellow lines on either side of a certain street. Sid arrived first and had painted three metres on the right-hand side when Jim arrived and pointed out that Sid should be painting the left-hand side. So Sid started afresh on the left-hand side and Jim continued what Sid had started on the right.

When Jim had finished his side, he went across the street and painted six metres for

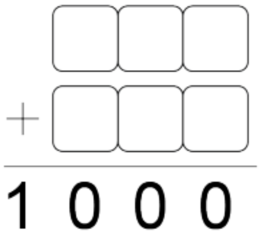
Sid, which finished the job. Both Sides of the street were an equal length.

Who painted the greatest distance?

QUESTION 20

Ana has nine tiles, each with a different integer from 1 to 9 on it. Ana creates larger numbers by placing tiles side by side. For example, using the tiles 3 and 7, Ana can create the 2-digit number 37 or 73.

Using six of her tiles, Ana forms two 3-digit numbers that add to 1000.



What is the largest possible 3-digit number that she could have used?
