Leg 1

Question Paper

The Mandelbrot set

5 Mark Questions

Question 1

If $p \otimes q$ means $3p + q^2$, then $(3 \otimes 4) \otimes 5$ is equal to?

Question 2

How many factors does 2023 have?

Question 3

Two integers a and b are defined as follows:

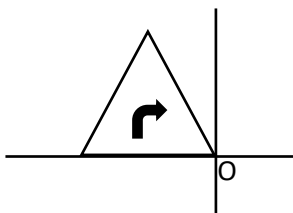

$$a = 1 + 2 + 3 + 4 + 5 + 6 + 7 + 8 + 9 + 10$$

$$b = 1 \times 2 \times 3 \times 4 \times 5 \times 6 \times 7 \times 8 \times 9 \times 10$$

What is the greatest common factor of a and b ?

Question 4

The triangle shown is rotated 180° about O. Draw the outcome on your answer grid.

Question 5

Two dice are rolled. What is the probability that the sum of the two numbers shown is odd?

Question 6

A bucket is filled half way with water. A cleaning liquid fills another 2 litres of liquid into the bucket.

Now the bucket is $\frac{3}{4}$ full.

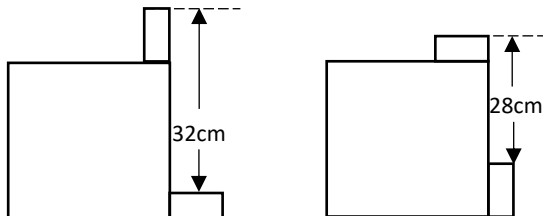

How many litres of fluid in total can fit into the bucket?

Question 7

If $x > y$, solve for x and y in the equation: $x^3 + y^3 = 65$.

Question 8

A large box and two identical small bricks are arranged in two ways as shown in the diagram below.

What is the height of the box?

Question 9

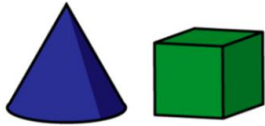

In recreational Mathematics, a square array of numbers, usually positive integers, is called a magic square if the sums of the numbers in each row, each column, and both main diagonals are the same. Using the numbers 1 to 9, complete the magic square below using the given information and transfer your answer to the answer sheet.

6		
2		4

Question 10

The combined mass of the 2 shapes in the top image is 56 g. The combined mass of the 3 shapes in the bottom image is 72 g. Cones and cubes are identical throughout.

What is the mass of a cube?

10 Mark Questions

Question 11

It is given that an equilateral triangle has a perimeter numerically equal to its area. What is the side length of triangle?

Question 12

What is the sum of the digits when we multiply 2^{2023} by 5^{2020} ?

Question 13

Let a, b, c and d be four numbers with $a < b$ and $c < d$.

The average of a and b is c . The average of c and d is b .

If $d - a = 60$, what is the value of $b - c$?

Question 14

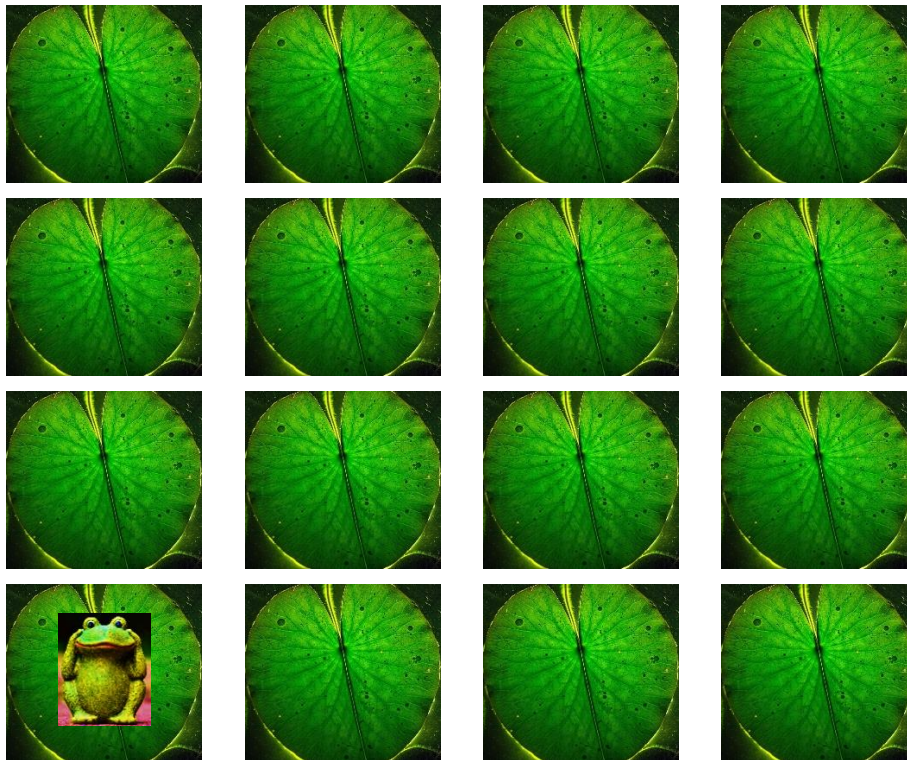

Lots of different positive whole numbers were written on a blackboard. Exactly 2 of these numbers are divisible by 2, and exactly 13 of these numbers are divisible by 13. The biggest number on the board is " m ".

What is the smallest value that " m " can be?

Question 15

On a pond 16 lilly pads are arranged in a 4x4 grid as shown in the diagram below. A frog sits on a lilly pad in one of the corners of the grid (as shown on the picture). The frog jumps from one lilly pad to another horizontally or vertically. In doing so he always jumps over at least one lilly pad. He never lands on the same lilly pad twice.

What is the maximum number of lilly pads, including the one he is sitting on, on which he can land?

A blank lilly pad to assist your answer

20 Mark Questions

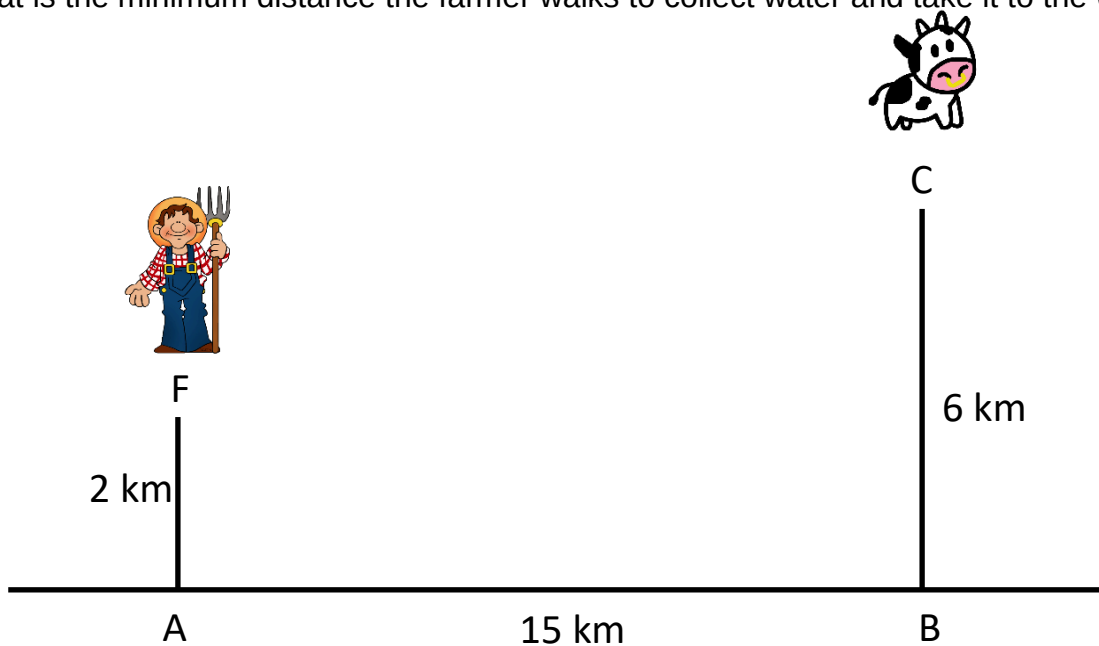

Question 16

What is the remainder when 2^{645} is divided by 7?

Question 17

A farmer (F) is 2km away from point A. A and B are 15 km apart and represent a stretch of river on the farm. A cow (C) is 6km from point B. The farmer wants to take water to the cow who cannot move. The farmer will walk to a point between A and B and then walk with the water to the cow. The farmer wants to minimize the distance he wants to walk in total.

What is the minimum distance the farmer walks to collect water and take it to the cow?

Question 18

In the equation $N \times U \times (M + B + E + R) = 33$ each letter represents a different digit (0,1,2,...,9)

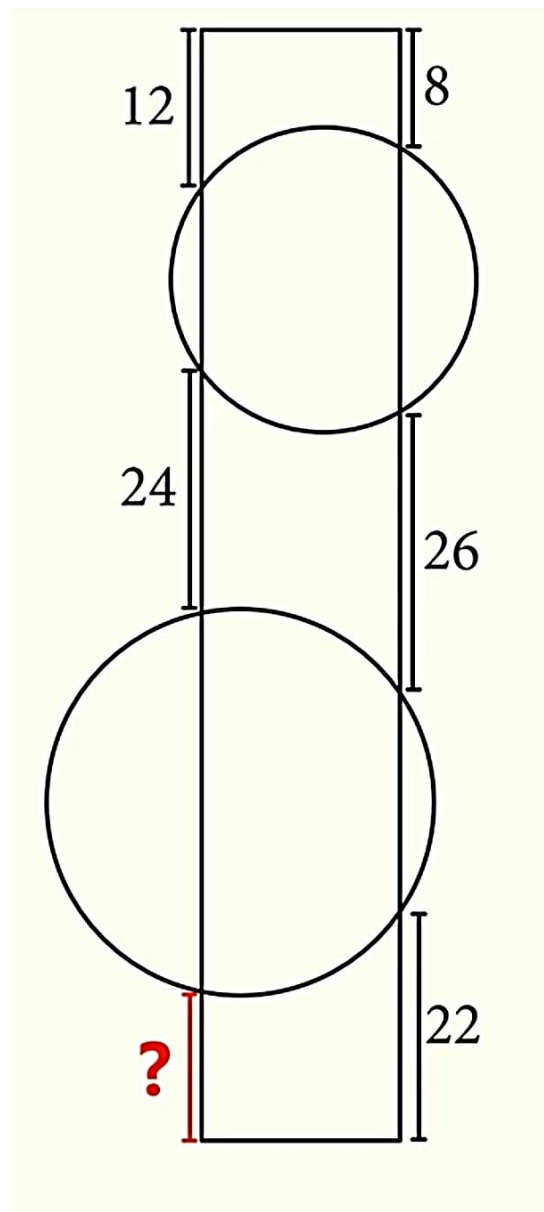

In how many different ways can the letters be replaced by different digits?

Question 19

A bag contains 5 sticks of length 2; 3; 4; 5; and 6 units.

How many different triangles can be formed from these sticks?

Question 20

Total: 200
